

Box Tree Moth

KEEP YOUR BOXWOODS HEALTHY

From May to September, check your boxwoods for chewed leaves, larvae, webbing and sawdust-like debris (frass).

LIFE CYCLE

EGGS

LARVA

PUPA

ADULT

As a popular and versatile shrub, boxwoods are an important and essential part of Canada's landscape.

Prevent the spread of box tree moth (*Cydalima perspectalis*), an invasive pest that damages boxwoods (*Buxus*).

Treatment options are available when larvae are feeding. For help preventing and controlling box tree moth: horttrades.com/box-tree-moth-help

To learn more and to report sightings or feeding damage on boxwood in Eastern Ontario and the rest of Canada: inspection.canada.ca/boxtreemoth
